November 19, 2007

Dear Richard:

I just wanted to express our sincere thank you for empowering our club and candidates with the ability to not only target our voters, but ensure they voted, which resulted in our slate of candidates sweeping the municipal race in the city of Linwood.

I ran with my incumbent Mayor, and I was an incumbent council member. On our ticket was a first time council candidate, she was running against a fairly strong Democratic incumbent. There is no doubt in our minds that your technology was the reason that we were all successful.

The fact that we were able to identify our “friends and family” and then easily determine if they had voted, made this process undeniably an asset. More importantly, the fact that our club member was able to be part of the process was key to the election. At their own leisure, they identified their “list” of voters. On Election Day, in real time, they were able to determine whether their list had voted and then subsequently call their identified voters to ensure that we received every favorable vote possible in the city. This was all done without any of them having to come to our campaign headquarters! It is an amazing process and our club members were not only impressed but more than satisfied.

It is always difficult to get volunteers but your technology allows people to sit at their home or office and be a part of the process. We had more club members volunteering and participating in the process then ever before, it was so simple

Thank you again for enlightening us to this technology and we look forward to working with you in the future. I would enthusiastically recommend your technology.

Sincerely,

Donna Taylor
